L'ordre des séquences I à IV est ad libitum. * Chaque séquence doit "obligatoirement" débuter par le pizzicato d'ouverture et se terminer par le pizzicato de fermeture. A l'intérieur de chaque séquence l'ordre des événements (a) à (h) est libre. Chaque événement contrôle la transposition des toupies vers l'aigu. L'ambitus des transpositions ainsi que les vitesses des rotations seront déduites de la durée de la poutre de l'archet.

Les événements (a) à (d) provoqueront des accélérations, (e) à (f) des ralentissements. Il n'est pas nécessaire de jouer systématiquement tous les événements de chaque séquence. XXXX du passage d'une séquence à l'autre, en pas oublier de passer par les pizzicati de fermeture et d'ouverture. On peut répéter plusieurs fois un même événement. Cette action provoquera le maintien d'une même toupie dans la région aigüe.

Faire varier les temps entre chaque événement de manière à orienter les toupies dans de régions différentes de l'ambitus. Chaque séquence produira un accordage de **SYNFUL** sur les hauteurs indiquées en fin de portées. Les profils et les durées des événements devront varier (comme ————).

Une durée brève provoquera une montée rapide, une durée longue, une montée plus lente. Les notes indiquées en o servent uniquement à indiquer quelle hauteur doit être détectée par les STR.
